The Western Victoria Transmission Network Project is proposing hundreds of high voltage towers across our landscape and a massive terminal station which will irreversibly impact our livelihoods and landscape. The Stop AusNet's Towers campaign urgently needs your help to get a better solution.

We know that this project will devastate communities, destroy the environment, permanently effect our productive farms, decrease our property values and heighten the risk from devastating bushfires.

Stop AusNet's Towers is a self-funded, grass roots community campaign. AusNet is a foreign-owned, multi-billion-dollar corporate business.

Your important donation will allow us to mount a credible, convincing and vigorous campaign that will seek the project be delivered in a way that is acceptable to the community.

Our strategy involves the engagement of formidable legal representation, credible independent experts and leading campaign and lobbying specialists.

Collectively we will ensure the community's best interests are considered and that AEMO and Victorian Ministers for Energy and Planning are persuaded to change the project to connect the West's renewable energy in a socially acceptable way.

We need to stand together to effect change and require significant funds to support a well targeted, professional campaign.

The Stop AusNet Towers Campaign Team is a well-established and transparent group of dedicated community members supported by legal, technical and campaign professionals that represents all areas of the impacted communities. Have you considered joining one of our working groups to help?

Moorabool Central Highlands Power Alliance Incorporated.

THE FIGHT: Your donation today will help our Stop AusNet's Towers Fighting Fund, starting with these top priority actions:

The First Stage:

- Back to the drawing board. As per expert advice, we know the process (the RIT-T) that gave the green light to the Western Victoria Transmission Network Project was fundamentally flawed and we're taking legal action.
- We've engaged top experts and a formidable legal team to force the RIT-T to be redone as per the National Electricity Law, essentially "back to the drawing board". Redoing the RIT-T must then deliver a better solution with social license from our communities.
- Challenge AusNet's land access. We've obtained high quality legal advice and arranged legal support for the community in relation to AusNet's rights to land access and their proposed easement acquisition.
- A targeted political campaign. Use of strategic campaign services to help lobby the government and AEMO and engage with the media and key stakeholders, and provide campaign support including marketing, advertising, website, collateral, signage, and media coverage. A successful campaign will become an irresistible force on key decision makers at AEMO and the Victorian government.

Preparing our Fall Back:

- Challenging AusNet's Environmental Effects Study (EES). If the RIT-T is not forced to be redone beforehand, the EES Inquiry will be due around mid-2022. By engaging leading legal representatives and experts to prosecute our case emphatically, we'll make sure our community's voice is heard loud and clear. Key expert areas include underground, visual impact, economic, agriculture, bushfire, etc. A successful outcome will see the Planning Minister reject approval of the EES and leave AusNet's project in tatters.
